SOME LOCKS ARE SIMPLY CLOSED TO COMPETITION

The quality hook lift container lock from C.T.S., produced in house, is phenomenally strong and extremely secure. The new lock meets more than the stringent requirements of SCM/TNO.

The C.T.S. hook lift container lock prevents to hook on and take away in case of an attempt to steal your (roll off)container.

The hardened C.T.S. steel container lock is also very efficient when it comes to fastening.

The C.T.S. container lock will be closed with the unique Abloy PL358 padlock which is concealed in a steel casing.

The C.T.S. hook lift container lock is suitable for K.T.K., Domat, Schenk, Translift, Lebur, A.C.T.S., L.V.C. (roll off)containers, and others.

The C.T.S. hook lift container lock is one of the many mechanical security products from C.T.S. for builders and transportation, both at home and abroad. They include king-pin locks, trailer ring locks, special loading platform security solutions and the like.

Our locks can be supplied as keyed-differently, keyed-alike or with master keys and can also be integrated in an existing key plan.
