cilinder

• Removal by  
force is virtually  
impossible

• Certificate and  
security card

• 2 keys

## SOME LOCKS ARE SIMPLY CLOSED TO COMPETITION

Years of experience and resulting developments ensure that the unique CTS King-Pin Lock will resist attempts to steal your trailer

The facts are self-evident: even a lateral force of 20 tons will not dislodge this sturdy lock from the King-Pin (competing products can withstand forces up to 4 tons)

When fitted, the lock itself is enough to discourage thieves; the lock casing, which is very sturdy, acts as a deterrent. There are no moving parts that can be deformed (and thus be rendered useless) in case of an attempt being made to steal your trailer.

The CTS King-Pin Lock has the unique Abloy/CTS cylinder that can be removed from its steel casing, which facilitates maintenance jobs such as cleaning, lubrication etc.

The Locks can be interchanged very easily, which helps your company's logistics. The exclusive CTS cut of the keys ensures that you, and only you, can obtain the key/lock combination
